Experience

Full Stack Developer - *Virgin Experience Days Ltd*. Ecommerce Website   **January 2018 - Present**

- Recognised with outstanding feedback in performance reviews
- Lead development of a number of projects, developing high-quality, well-tested code for an ecommerce website taking tens of thousands of orders per month
- Played a key role in efforts to migrate from a monolithic to a microservices architecture
- Designed solutions, involved in architectural as well as technological decisions
- Code reviews
- Mentored junior team members
- Recently lead the development of our transactional email migration to SendGrid. At the time of writing we have sent over 380,000 emails using the new system, with a delivery rate of 99%
- Worked on a wide range of problems, developing a similarly wide range of skills in both front and back-end disciplines

Projects

CMET, *Bournemouth University Disaster Management Centre* (BUDMC)   **2017**

During my final year I worked with the BUDMC to developed a disaster simulation and training tool. It was built using PHP, JavaScript, and MySQL. For more information see *http://budmc.uk/exercising---simulations.html*
